Tugas 10 – Kontruksi dan Implementasi PL
Kelompok 4
Nama :

1. **Dhamara Yudha Prakoso | NPM 202343501421**
2. **Silvian Kusdi | NPM 202343501504**
3. **Theresa Maria M | 202343501400**
4. **Rahayu Sintia Foni | 202343501513**

#1. User

Class Diagram	Kode Program (PHP)

	<?php
	class User {
	public int $id;
	public string $name;
	public string $email;
	public string $password;
	public string $role;
	public string $created_at;
	public function register(): bool {
	// Implementasi register
	return true;
	}
	public function login(string $email, string $password): bool {
	// Implementasi login
	return true;
	}
	public function logout(): void {
	// Implementasi logout
	}
	public function updateProfile(array $data): void {
	// Implementasi update profile
	}
	}

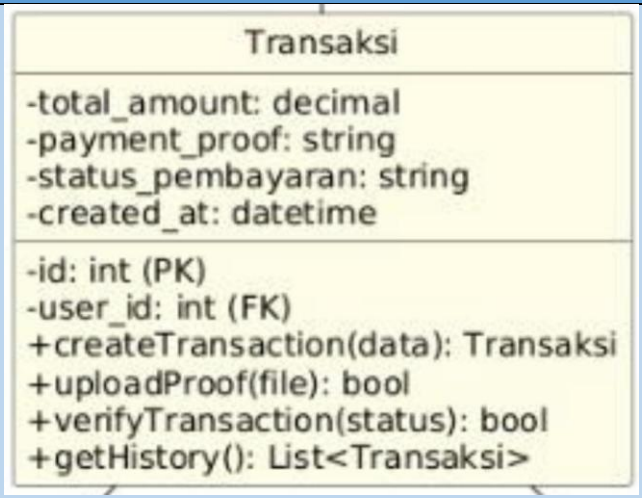

#2.Footage

Class Diagram	Kode Program (PHP)

	<?php
	class Footage {
	public int $id;
	public int $user_id;
	public int $category_id;
	public int $status_id;
	public string $title;
	public string $description;
	public float $price;
	public string $file_path;
	public string $preview_url;
	public string $created_at;
	public string $updated_at;
	public function upload(array $data): Footage {
	// Implementasi upload footage
	return new self();
	}
	public function update(array $data): bool {
	// Implementasi update footage
	return true;
	}
	public function delete(): bool {
	// Implementasi delete footage
	return true;
	}
	public function getDetail(): Footage {
	// Implementasi get detail
	return new self();
	}
	public static function search(string $keyword): array {
	// Implementasi pencarian
	return [];
	}
	public static function filter(int $category_id): array {
	// Implementasi filter berdasarkan kategori
	return [];
	}
	}

#3. Transaksi

Class Diagram	Kode Program (PHP)

	<?php
	
	class Transaksi {
	    public int $id;
	    public int $user_id;
	    public float $total_amount;
	    public string $payment_proof;
	    public string $status_pembayaran;
	    public string $created_at;
	
	    public function createTransaction(array $data): Transaksi {
	        // Implementasi pembuatan transaksi
	        return new self();
	    }
	
	    public function uploadProof(string $file): bool {
	        // Implementasi upload bukti pembayaran
	        return true;
	    }
	
	    public function verifyTransaction(string $status): bool {
	        // Implementasi verifikasi transaksi
	        return true;
	    }
	
	    public function getHistory(): array {
	        // Implementasi mendapatkan riwayat transaksi
	        return [];
	    }
	}

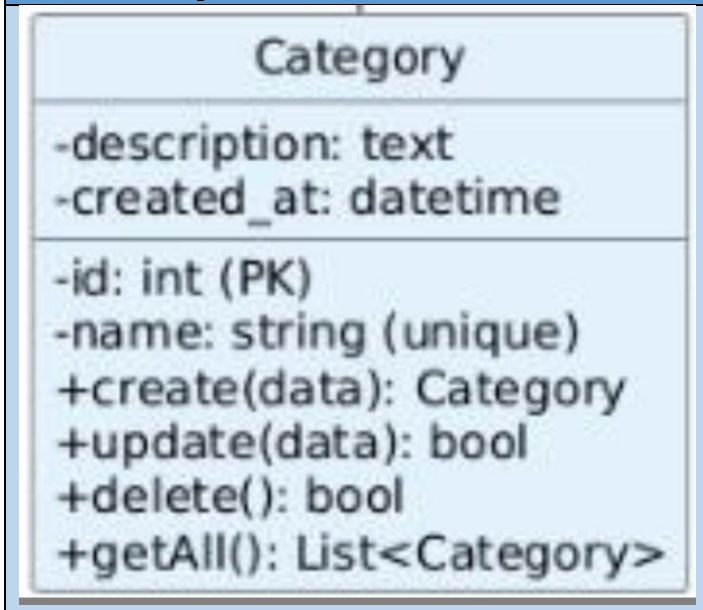

#4. Search History

Class Diagram	Kode Program (PHP)

	<?php
	
	class SearchHistory {
	    public int $id;
	    public int $user_id;
	    public string $keyword;
	    public string $searched_at;
	
	    public static function getAll(): array {
	        // Implementasi mengambil semua riwayat pencarian
	        return [];
	    }
	}

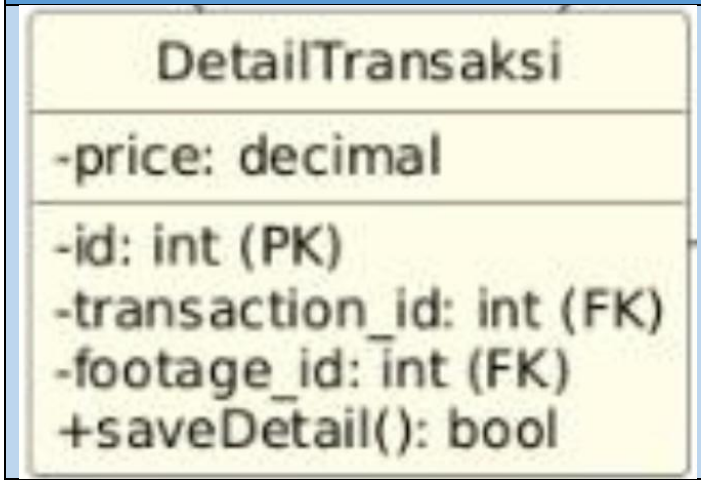

#5. Category

Class Diagram	Kode Program (PHP)

	<?php
	
	class Category {
	    public int $id;
	    public string $name;
	    public string $description;
	    public string $created_at;
	
	    public function create(array $data): Category {
	        // Implementasi membuat kategori baru
	        return new self();
	    }
	
	    public function update(array $data): bool {
	        // Implementasi update kategori
	        return true;
	    }
	
	    public function delete(): bool {
	        // Implementasi hapus kategori
	        return true;
	    }
	
	    public static function getAll(): array {
	        // Implementasi mengambil semua kategori
	        return [];
	    }
	}

#6. Detail Transaksi

Class Diagram	Kode Program (PHP)

	<?php
	
	class DetailTransaksi {
	    public int $id;
	    public int $transaction_id;
	    public int $footage_id;
	    public float $price;
	
	    public function saveDetail(): bool {
	        // Implementasi menyimpan detail transaksi
	        return true;
	    }
	}
